MORE THAN MAPS

We love maps at Orbica. We also love location data. But it doesn't always follow that a map is the single best way to tell your location data's story - especially if it's multi-level data. Sometimes you need more tools in your toolbox to communicate the story behind your facts and figures well.

Decision makers and public audiences need to quickly understand your data. We've made it easy by combining business intelligence, geospatial technology and narrative to create OrbVis: a smart data visualisation tool that brings your data to life.

YOU'VE GOT THE POWER

OrbVis is a web solution that gives you control over your own content and options to customise design elements to your specifications, then publish to your own site, fully supported by Orbica's cloud platform.

Our CMS and data visualisations can also be tailored more specifically to your needs as required. They've been created using the latest open-source technology to cater for multi-level data with interactive charts, maps and narrative, and can be configured to integrate with your own business systems.

ACHIEVE YOUR GOALS

- ✓ Engage your audience with compelling visuals and narrative
- ✓ Increase public engagement
- ✓ Understand complex portfolios, programmes and multi-level data
- ✓ Manage your own content - your story changes with you

SO... LET'S TALK

Seeing is believing: visit <https://rates.ecan.govt.nz/> for a demonstration of the power of OrbVis.

We'd love to chat with you about how OrbVis can change the way you view location data.
